Senior Software Development Engineer with upto 5 years designing, building, & shipping **high-availability, scalable platforms** and **automation pipelines**. Skilled in **distributed systems, microservices, cloud (AWS/Azure), CI/CD, & observability**, with hands-on expertise in **Python, Java, JavaScript/TypeScript, Angular/React**. Passionate about clean architecture, developer productivity, and delivering secure, **customer-centric software solutions**.

EXPERIENCE

AMD

September 2025 – Present

Senior Software Development Engineer, DCAuto Platform

- Developed features for **DCAuto**, AMD's internal platform automating **firmware CI/regression testing** for **AMD MI450 data center GPUs** by orchestrating deployments & workloads across physical **Systems(SUTs)**.
- Architected and shipped **PSN self check-in (HKYSY mode)** with idempotency and fallbacks to harden DCAuto deploy/submit workflows and recover from transient infra/SUT failures.
- Built **DCAutoAI / Sherlog Holmes** (AMD AI Hackathon): 5-stage failure triage for GPU firmware validation (**50,000+ line logs**) using embeddings + **FAISS** vector search and **LLM** root-cause analysis; shipped Flask v3 APIs with **Celery/Azure Service Bus**, MongoDB, and Teams alerts.

Tech Stack: Python, Flask, Celery, WebSockets, PostgreSQL, MongoDB, Redis, Azure, CI/CD, Docker, FAISS

Qualcomm

August 2022 – June 2025

Software Engineer

- Designed and built **scalable, high-availability** systems for **Qualcomm Software Center (QSC)**, an Electron app built using **NodeJS, Angular, & TypeScript**, ensuring seamless device-driver delivery for global OEMs.
- Delivered the first MacOS universal release for QSC**, single-handedly resolving cross-platform dependencies and ensuring a frictionless rollout to **Fortune 500 clients like Apple, Samsung, and Bosch**.
- Owned the **end-to-end release management** process, automating **CI/CD pipeline** (Jenkins + AWS), packaging multiple modules, and enhancing **code quality** via rigorous **design/code reviews**.
- Architected **AWS-based deployment pipelines** and integrated logging/monitoring, reducing software release times by **50%** and improving incident response.
- Collaborated daily with engineering managers and enterprise clients (**eg. Microsoft, AT&T, BMW**) to triage bugs, plan and build **key UI feature releases**, and ensure stability.

Tech Stack: NodeJS, Angular, Electron, Javascript, AWS, High-Availability Systems, CI/CD, Python

Licious

June 2021 – July 2022

Software Development Engineer

- Designed and **implemented scalable microservices** in Java (Spring Boot) and PHP, **optimizing high-volume order processing** for a nationwide POS system.
- Architected RESTful APIs, reducing API response times by **25%** across 100+ delivery centers.
- Built an **automated unit testing framework** using REST-assured, enhancing test coverage.
- Automated **infrastructure deployment** with Docker and Kubernetes, streamlining development workflows.

Tech Stack: Java, SpringBoot, PHP, Microservices, High-Traffic Systems, Docker, Kubernetes, AWS

EDUCATION

BITS Pilani KK Birla Goa Campus

2017 – 2021

Bachelor of Engineering(Hons.)

PROJECTS

High-Scalability System Design, QSC | Qualcomm

- Engineered **high-performance API gateways**, assisted in **Axway-to-Apigee migration for QSC**, handling millions of requests per second.

Prognostics Modeling of Part Degradation in Turbofan Engines | Thesis, BITS Pilani

- Designed LSTMs and ensemble based AI models using TensorFlow, achieving an R2 score of 0.75 for turbofan engine **life-cycle prediction**.

DeepFake Generation and Detection Using GANs | BITS Pilani

- Modelled GANs for generating clear, recognizable images using PyTorch, achieving an 80% accuracy.

SKILLS

Python, Java, SpringBoot, JavaScript, TypeScript, React, Angular, NodeJS, Flask, SQL, PostgreSQL, Redis, AWS, Azure, Docker, Kubernetes, CI/CD, JIRA, Monitoring, Observability, Firmware Test Automation, AI Triage
